ALL SHOES ARE DYED TO DAYLIGHT

1. All shoes are cleaned prior to dyeing but some marks and glue cannot be removed and will only show up after dyeing. The glue used in shoe manufacture often cannot be seen by the naked eye. The dye will not impregnate the glue, and as a result, there may be patches where the dye does not take.
2. If the swatch provided is of a different fabric from the shoe we cannot guarantee the match due to the different compositions of fabric.
3. The dye used is water-soluble so will therefore 'run' in the rain. A water-protectant spray such as Kiwi will help to minimise 'runs' but will not offer any guarantees.
4. Silk is a natural fibre and as such may have minor variations due to the slub retaining more colour. This is a natural feature and should not be seen as defective.
5. Bindings and trims may also differ in colour due to them being of different material.

ALL ITEMS ARE DYED AT THE CUSTOMER'S OWN RISK

I have read the above information and understand the possible risks involved when sending items for dyeing. I am prepared to have the work carried out with this in mind.
